## Workshop II

## Les données : Manipulation de variable

Voici quelques fonction native Javascript:

```
r maVariable = String.fromCharCode(65);
console.log(maVariable.charCodeAt());
                 f maVariable);
console.log(maVariable.toLowerCase());
console.log(maVariable.toUpperCase());
console.log(Number.isInteger(maVariable));
console.log(typeof parseInt(maVariable));
                cof maVariable.toString());
```
